Asthma Management Plan A self – help guide to managing your Asthma

Information and advice for patients

Respiratory service

Name:		
GP (Tel:)		
<		J

What is an asthma management plan?

An asthma management plan is a written plan that helps you control your asthma.

It shows your daily treatment, what medicines to take and when to take them.

Your plan describes how best to control your asthma in the long term and how to manage worsening asthma or attacks.

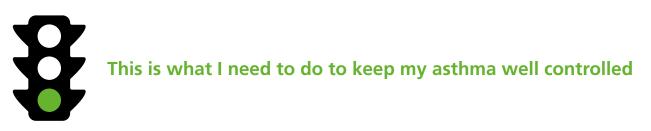

Why use an asthma management plan?

It is your personal guide to help you control your asthma.

People who use their action plan are four times less likely to end up in hospital because of their asthma.

Attending regular asthma reviews means that we can change your medications according to your asthma control. This can avoid over treatment.

My Asthma Management Plan

Target peak flow (>80% of best peak flow):						
My preventer inhaler : Name/Colour						
I need to take my preventer inhaler every day even when I feel well.						
I take puff(s)a day						
My reliever inhaler Name/Colour						
Puff(s) when needed						
Inhaler technique checked \Box						
I take my reliever inhaler only if I need to.						
For example:						
I'm wheezing						

- My chest feels tight
- I'm finding it hard to breath
- I'm coughing

If my asthma is well controlled, I should not need to use my

reliever more than times a week

- Cough
- Wheeze
- Chest tightness
- Breathlessness
- Waking up at night due to asthma
- Can do some but not all usual activities

My peak flow drops to or below

Continue to take your preventer inhaler puff(s) a day

If, after two days my asthma symptoms are getting worse or I am

using my times a day.

Make an urgent appointment to see my GP or asthma nurse.

If I have been given Prednisolone tablets take:

..... which is x5mg tablets

For days or until target peak flow achieved and stable for two days.

Call my GP or asthma nurse and let them know I have started taking steroids and make an appointment to be seen within 24 hours.

- I feel very breathless
- I cannot talk in full sentences
- I find it difficult to walk or complete usual activities
- I am wheezy and my chest feels tight

My peak flow drops to or below.

This is an emergency, take the following actions! Sit upright and remain calm Take one puff of your reliever inhaler every 30-60 seconds up to 10 puffs through a spacer if you have one If you feel better after taking Salbutamol, please

taking Salbutamol, please book an urgent same day appointment with your GP. If you feel worse, call 999 and continue to take your reliever inhaler one puff every 30 - 60 seconds.

Asthma triggers

My triggers are: (please circle)

Dust	Pollen	Cats	Dogs	Rabbits	Mould	Birds		
Feather	rs Exer	cise	Air pollut	ion C	Colds/viruses			
Strong	odours	Cigare	ette smoke	Othe	ers			
I understand I should try to avoid my triggers \Box								

Smoking

- Increases your risks of an asthma attack
- Could permanently damage your airways
- Could be blocking the benefits of your asthma medicines

If you would like to give up smoking go to ww.nhs.uk/smokefree or your GP/Asthma nurse.

Asthma medicines

Preventers

Your preventer medicine reduces redness and swelling in airways and dries up the mucous. Preventers need time to work and need to be taken every day even when you are well.

Relievers

Your reliever medicine works quickly to make breathing easier by making the airways wider. Always carry your reliever with you!
